

QDMS Integrated Management System

Bimser Cozum Consultancy and Software

Office Automation

Ahmet Demirel, 05/07/2010

Product Background / Overview

Bimser Cozum Co is focused on Management Systems Software. One of them is QDMS. QDMS is an Integrated Management System Software package. It has approximately 170 installations in Turkey, and has around 180,000 end users. Our vision is to introduce our solution to all of world's companies that have an interest in Quality Management Systems. QDMS has 18 sub modules one of which is a Document Management System.

Requirements Scenario

Management System documents have revision history information. Generally this information was placed on Document header or footer sections. The view of our customers is that this data should come from QDMS Software automatically. In Office documents, we should place Revision Number or Revision Date information automatically. So, In the QDMS Application, Office documents are automated updated to contain this information in both Microsoft word and Microsoft Excel documents.

Solution Implementation

We had used Office Automation and com+ technology. But this case, our server had locked, crashed or failed to due to meaningless failures

We used the Aspose.Total product in order to change data in documents, and to prepare Excel Reports.

Benefits

A large benefit is that we are not paying Microsoft Office License for our clients.

Another large benefit is that we did not use com+ technology on the server meaning our applications are more robust and protected (Especially Security problems).

Our Excel Reports can be designed by our users. So we increase customer

satisfaction.

Conclusion

We have used Aspose.Total for 5 years. We like ASPOSE for Rapid development, good their support.
