Work history

March 2017-Current

Working as a freelancer and developed several products. The last one was <http://beverlycollective.com> this product is developed using Jquery, EJS, Express. Also had experience coding on JavaEE, wrote a module on SpringBoot and AngularJS for Kazpochta. That was a service for generating the questionnaire online and seeing the result as a statistic for each question.

September 2014-March 2017

TOO "Automato"

Built CRM&ERP systems for a small and medium businesses, worked as a team lead, as a full-stack developer. First big project named automato CRM architected and developed on MEAN stack. Second project was for automation of accounting. That was platform for generating most of accounting papers online, as a stack of development were chosen MERN. After I was participating on development of ERP system, that helped to control the productivity of IT company, accounting salary of employees, control of deadlines etc., that project also was developed on MERN stack. Than I Architected and development ERP system for automate HR. That was integration with hh.ru, project was developed on MEAN stack.

During the work in that company, I developed the methodology for writing the code, on server side using ExpressJS on backend and AngularJS on frontend. I really like writing dry CSS using BEM methodology that was established by Yandex.

Education

2017

Bachelor of Science: Information Systems
International Information Technology University in Almaty

About me

My name is Yelnur, I'm from Kazakhstan, 23 years old. Every day I'm trying to improve my skills, learning new technologies, a few month ago I learned writing code on python, to check how Machine learning is developing. Really like to participate in big and interesting projects. And want to improve my skills on higher level.
